

Owner ecosystem map — 8 repos, 1 system (1 page)

Forward this to a partner, developer or accountant. Shows the **live stack** behind Quietforge — patterns you can get scaled to your business. No fabricated metrics.

What this is

Norbert runs a real multi-repo ecosystem before selling automation to clients. This is not a slide deck — it is the architecture that powers case studies 01–04 on services.flexgrafik.nl.

Framing: owner ecosystem proof · not a product catalog for ZZP branding.

Layers (top → bottom)

Governance

Module	Role
flexgrafik-meta	Constitution — global rules, agent hierarchy, master plan
WorkFlow	Program office — backlog, strategy, daily ops entry

Products

Module	Role
zpackage.flexgrafik.nl	7-step wizard · open pricing · order form — configure calmly or delegate to designers

Orchestration & supervision

Module	Role
Flex-VCMS	Ecosystem orchestrator — vcms-scan.js, repos.yaml, conflict detection, SSoT registry, session handoffs. Supervises all repos.

Applications

Module	Role
flexgrafik.nl	Brand portal + chat assistant — routes visitors to wizard & game
app.flexgrafik.nl	Lead magnet game — coupons & leads → wizard
jadzia-core	AI backend · orders · ops · jadzia.db — modules improved via agent loop

AI execution

Module	Role
Agent OS	LangGraph: Planner → Coder → Tester → Review → Summarizer. HITL before deploy.
Agent OS UI	Mission Control dashboard — task create, health, approval gates

Client-facing & back-office

Module	Role
--------	------

services.flexgrafik.nl	Quietforge B2B — Automation Map, case studies, client delivery
Inbox Killer	Live inbox agent — classify → approve. Strongest process proof.

Typical flow (simplified)

Visitor → flexgrafik.nl (assistant) → wizard or game → order in jadzia.db
→ Agent OS builds & tests changes → VCMS scan (conflicts: 0 target)
→ human approves deploy · Inbox Killer handles email ops in parallel

B2B path: services.flexgrafik.nl → paid Automation Map → same 5-phase workflow

What we do NOT claim

- No fabricated MRR, conversion rates or hours saved
 - No promise that every module is production-perfect — status is honest per repo
 - Not legal or tax advice (see advisory case study for qualification-only assistant)
-

Related case studies

Case	Maps to
01 Inbox Killer	Back-office layer
02 Orchestrator	Agent OS + jadzia + VCMS
03 Sales Funnel	zzpackage wizard pattern
04 Advisory	Client engagement (anonymised)

Next step

Want this level of structure for your business? Book a paid **Automation Map** — we score which layers you need first (often simpler than the full stack).
